Clean Check<sup>®</sup> is a simple but revolutionary extendable backwater valve that eliminates the need for expensive and unsightly manholes regardless of the burial depth.

- Easy to perform maintenance & inspection from ground level
- “Hands-off” cleaning
- Meets all model construction and plumbing codes

**NO** costly manhole - direct bury up to 12 feet.

**NO** more backwater valves indoors which could be hidden by cabinets, stairwells, or floor coverings.

**NO** more sewer gas or mess into the building during maintenance inspection.

# Ground Level Access

A. LOUIS SUPPLY CO.

(Fig. A) Demonstration of flow:

The Clean Check® assembly includes: (1) lower collar with flapper, (2) upper collar & (3) valve body. When water flows through the system (green arrows), the flapper opens allowing waste to flow from the home/building to the sewer. In the event of a backup (red arrows), the flapper will seal preventing sewage backup into your home/building.

- Prevent sewage backup into a residence or building as a result of a plugged sewer system.
- Valve flapper seals the system, blocking reverse flow.

- The unique design allows accessibility at any burial depth, thus eliminating the need for vaults or manholes, it is direct buried using a riser pipe and standard cleanout plug.

- Backwater valves are required under the model code when the flood level rim of the lowest fixture in a structure is below the first upstream manhole cover and they must be accessible for inspection and service.

- Complies with the requirements of IAPMO/UPC, ICC, IPC and CSA Standards.

Code	Description	Qty. per Case
Clean Check - ABS		
96903	3" ABS	6
96904	4" ABS	6
96913	3" ABS w/adaptor & plug	4
96914	4" ABS w/adaptor & plug	4
Clean Check - PVC		
96923	3" PVC	6
96924	4" PVC	6
96926	6" PVC	3
96933	3" PVC w/adaptor & plug	4
96934	4" PVC w/adaptor & plug	4

All replacement parts including the flapper are individually available.
